

TSA | architects, p.l.l.c.

Profile

TSA architects pllc provides Total Development Solutions through partnerships with clients and communities. Our firm is dedicated to the concept of delivering practical design solutions, not just pretty pictures. In today's increasingly complex matrix of financial, regulatory, and technical constraints, clients need problem solvers. We recognize that the best looking design means nothing if it is not clearly described in construction documents that can be approved through the bureaucratic process and built within a financially feasible budget.

Key Staff

The firm's two principals, Steve Thomas and Kent Smutny are licensed architects registered in the states of Washington, Oregon and Alaska. The office is staffed with professionals possessing analytical tools from a variety of architectural fields. We at TSA architects pllc are focused on delivering practical, well thought out projects that are adequately described in clearly assembled construction documents utilizing Autodesk Revit in order to make use of Building Information Modeling (BIM). We deliver solutions.

Project Experience

There is no substitute for experience. Combined the two principals, Steve Thomas and Kent Smutny, have more than five decades of experience producing high quality, cost effective projects that respond to the needs of their clients and the demand of the market place. Steve Thomas and Kent Smutny have designed a wide range of different projects. While multi-family and single family design has been the mainstay of the firm in the past decade, the principals and staff at TSA Architects also have experience with commercial, office, retail design, site planning, tenant improvement, and interior design. With their vast background, TSA Architects has the experience to address the site, environmental, sustainable, and programatic issues that are likely a part of your project.
