## Single Family Project Experience

Our staff has over thirty-five years experience in Single Family design. Our projects include not only custom residences for select clients, but also builder speculative homes. Custom homes range in size from over ten thousand square feet down to smaller twelve hundred square foot custom mountain retreats. The average home size ranges from two thousand to four thousand square feet. Design styles include Northwest contemporary to more Ultra modern homes.

Attention to client's needs and wishes are of particular importance with any design in addition to noting financial budgets, value engineering, detailing, materials selection, and interior features. The total design process starts with our initial client meeting and discussions on generating the client's design program. Each of the critical items that will lead to a successful design and construction solution are discussed in detail. Communication not only with the client but also the client's contractor will keep the project on time and on task resulting in a quality product.

"If I would have known we could have a home like this, we would have done so many years ago!" —Jeff Jobe

We take pride in client satisfaction.
